Question 1: What is the primary function of a turbocharger?

Answer: To increase the engine?s power output by forcing more air into the combustion chamber.

Explanation: A turbocharger uses exhaust gases to spin a turbine, which compresses incoming air, allowing the engine to burn more fuel and produce more power without significantly increasing engine size. Understanding this helps differentiate turbocharged engines from naturally aspirated ones.

Question 2: Which company manufactured the first mass-produced electric vehicle?

Answer: General Motors with the EV1.

Explanation: The GM EV1, introduced in the 1990s, was among the first modern electric vehicles produced at scale. Recognizing key milestones in EV history is essential for answering such questions accurately.

Question 3: Which safety feature is designed to deploy during a collision to protect passengers?

a) Airbags

b) Anti-lock Braking System (ABS)

c) Traction Control

d) Cruise Control

Answer: a) Airbags

Explanation: Airbags are designed to deploy rapidly during a collision to cushion and protect

occupants. While ABS and traction control improve vehicle stability, they are not collision-deployment safety devices.
